THE HUB® SOFTWARE RELEASE NOTES

Build No. v8.4.0

Overview

This release of The Hub® software features editing of custom fields, and a bug fix for the software update progress bar.

New Features

Editing/Updating Custom Fields

Users can now edit/update Custom Fields details without stopping the currently-running job on a CoPilot system, *if enabled on The Hub software*. The changes are noted on the summary graph and notes widgets on the CoPilot system, and on the Process Monitoring Reports, Machines, and Molds views, as well as the Job Audit, Job Overview, and Multi[ple]-Job Overview reports on The Hub software.

Bug Fixes

Debian The Hub Software Update Progress Bar

When a user uploaded and installed a The Hub software update for a Debian system, the progress bar failed to display.
